

MAPPING REPORT

...nurturing hopes!

VOCATIONAL INSTITUTIONS & ARTISANS IN RUKUNGIRI, SHEEMA, WAKISO AND JINJA DISTRICTS OF UGANDA

June 2017

Study undertaken by: Child Rights Empowerment and Development Organization (CEDO-Uganda)

With financial support from: USAID/Uganda

Contract No.: 4717-2014-003-1

Disclaimer:

This study was made possible by the support of the American People through the United States Agency for International Development (USAID). The author's views expressed in this publication do not necessarily reflect the views of the United States Agency for International Development or the United States Government.

MAPPING REPORT

**VOCATIONAL INSTITUTIONS & ARTISANS IN RUKUNGIRI,
SHEEMA, WAKISO AND JINJA DISTRICTS OF UGANDA**

ACKNOWLEDGEMENTS

Child Rights Empowerment and Development Organization (CEDO), wishes to express its appreciation to all individuals, groups and organizations that contributed to this exercise.

Special recognition goes to political and technical leadership in the districts of Jinja, Rukungiri, sheema and wakiso; most of who provided valuable information as key informants during the mapping process in their respective local governments. In addition, the contribution by individual community members and Group Leaders who participated actively in different capacities as Data Collectors or Respondents is hereby appreciated.

CEDO-Uganda further appreciates the financial support of USAID/Uganda under the auspices of the Private Health Support Program that made it possible to undertake the mapping exercise.

I acknowledge the contribution of the Project technical team that Designed and carried out this Mapping Exercise for Vocation institutions and Artisans in Different Project locations. In the same way i acknowledge the efforts of the ICOBI field staff and volunteers towards this Process.

Byabasaija Abdallah
Executive Director

EXECUTIVE SUMMARY

This report presents a summary of findings of a mapping exercise of vocation institutions and artisans in districts of Jinja, Wakiso, Rukungiri and Sheema.

This exercise was carried out between 15th May and 17th May 2017, with the objective of identifying existing vocational institutions and artisans, with the potential to support delivery of economic strengthening interventions for HIV/AIDS Peer Support Group members and VSLA Group Members. The exercise would be followed by a comprehensive capacity assessment of the mapped institutions and artisans to select those with capacities to partner in the provision of placement opportunities for the project beneficiary communities.

For the purpose of achieving the above objective, the exercise was carried out specifically in sub counties covered by ICOBI's Community Based Health insurance interventions or institutions in its vicinity. By end of the exercise, 26 vocational institutions and 24 local artisans had been mapped as per summary below.

Sn	District	No of Institutions Mapped	No of Artisans Mapped
1	Jinja	05	04
2	Sheema	11	06
3	Wakiso	00	13
4	Rukungiri	10	01

Findings indicated a match of interests between the would-be service providers and the beneficiary community. Significant trades provided were in the sectors of: Agriculture, processing, mechanics,

catering, interior designs and art crafts. However, not all targeted sub counties had an existing vocational institution or a credible artisan. For instance all project Sub counties in Rukungiri and Wakiso District did not have any existing vocational institution, while local artisans were concentrated in major trading centers. This presented a potential challenge in the way the planned vocational and apprenticeship placements would be done.

In conclusion, while the mapped institutions and artisans presented a potential of engaging with the project on both formal and non-Formal skills trainings, it is recommended that meaningful placements will require the selected partner institutions or artisans to be facilitated by the project to carry out direct community outreaches as opposed to the participants moving to the distant institutions for placements.

PART I: INTRODUCTION

CEDO–Uganda secured financial support from USAID/Uganda Private Health Support Program in March 2017 to execute a performance based grant activity titled “Skills and Livelihoods Training in Income Growth and Enterprise Development”, to increase the ability of HIV/AIDS peer support groups members, Village Savings and Loan (VSLA) group members, and their respective households to pay for health services through economic strengthening initiatives.

This Mapping is part of a systematic approach for generating information about the vocational institutions and artisans with the potential to support delivery of economic strengthening interventions through formal and non-formal vocational and apprenticeship opportunity placements.

1.1. Justification of the Mapping Exercise

Cognizant that potential partners with demonstrated training capacity and previous experience working with the targeted beneficiaries have a profound impact on delivery of economic empowerment initiative, Child Rights Empowerment and Development Organization (CEDO Uganda) undertook the mapping exercise to establish the available vocational institutions, skilling initiatives and local artisans to offer vocational, apprenticeship and training opportunities to the direct beneficiaries.

In view of the above, it was necessary to conduct the mapping exercise for all potential vocational institutions and artisans in the project area. This was envisaged to establish relevant institutions and individuals with the potential to play complementary roles in improving linkages with vocational training and business development support services which may offer one means of making improvements in delivery on economic strengthening interventions. In addition, assess the combination of approaches and interventions which may be required to strengthen the capacities for existing potential partners (institutions and artisans) in regard to delivery of the required interventions.

1.2. Objectives of the Mapping

1. To map existing vocational institutions and artisans within the project sub counties or in their vicinity in districts of Wakiso, Jinja, Sheema and Rukungiri with the potential to offer vocational and apprenticeship trainings to targeted project beneficiaries.
2. To establish the relevancy of trades being offered by existing Vocational institutions and artisan, cost of Services and, the nature and appropriateness of delivery model in respect to project Targeted beneficiaries.

1.3. Methodology Used

1.3.1 Key Informants Interviews (KIIs)

As herewith attached in Annex I, the mapping tool for KIIs was administered to map existing potential institutions and to collect the primary data. Key informants included: Head instructors, Principals and Directors of the Mapped vocational institutions and artisan businesses.

1.3.2 Secondary data analysis

In addition to the primary data collected from KIIs, secondary Data was collected from local political and technical leaders from both sub county and district levels. Besides, the Mapping team undertook literature review to obtain additional relevant data. This data was analyzed qualitatively.

1.3.3 Sampling of Respondents

Convenient sampling was applied in selection of respondents to the questionnaires. This is a judgemental sampling technique where samples were picked on presumption that they would satisfy the objectives of the mapping (White, 2002). Therefore, the survey sample included a wide spectrum of respondents who included individuals and institutions.

1.3.4 Data Analysis and Presentation

The data collected was majorly qualitative and was transcribed and thematically analyzed using sections developed from what the mapping sought to examine or the aim of the mapping. The qualitative data is presented in this report in form of descriptions and tables.

1.3.5 Quality Control

The field team was oriented for standardization and quality assurance purposes. During the orientation, the suggestions regarding suitability and refining of the questions for key informants were incorporated. Also, during this orientation, the field team was acquainted with fieldwork techniques and research skills.

The field team met at the end of fieldwork to discuss the findings and share experience and challenges encountered in the field and the solutions proffered to address those challenges. The filled questionnaires were reviewed with the team leader to check for response misallocations and other technical errors.

1.3.6 Ethical Considerations

In line with the requirements of the National Council for Science and Technology, care was taken to explain the purpose and objectives of the mapping exercise to all the respondents before their participation. Participation of respondents was on a voluntary basis and the data collection tool was designed in a way that guaranteed confidentiality.

1.3.7 Challenges encountered and how they were addressed

The major challenges encountered during the mapping included:

- a. The absence of records on some important basic information in some institutions' registration files, a phenomenon that prolonged the interviews with respondents in effort to obtain that information. However, the triangulation skill employed by the Mapping team addressed this challenge.
- b. The busy schedules of some key informants to effectively honour the time of appointments with the mapping team. However, though persistently done, appointments were lately secured in such cases and the cooperation made it possible for obtaining important information for the exercise.
- c. The timing of the study coincided with the holiday program of public institutions of learning. The team endeavored to meet contact persons wherever they were.

PART II: CONTEXTUAL BACKGROUND

CEDO's project, "Skills and Livelihoods Training in Income Growth and Enterprise Development for HIV/AIDS Peer Support Group Members and VSLA Group Members", involves strategies of empowering HIV/AIDS peer support group and VSLA group members in the targeted districts with necessary livelihoods skills and access to a portfolio of interventions to reduce their economic vulnerability and enable them provide for their healthcare needs.

Livelihood is the sum of ways and means by which individuals, households and/ or communities make and sustain a living. It is a concept that encompasses practices and processes much beyond the regular income generating activities. By and large, livelihood encompasses not only the economic activities that people engage in, but also their social, institutional and organizational environment.

Livelihood comprises the capabilities, assets (including both material and social resources) and activities required for a means of living. A livelihood is sustainable when it can cope with and recover from stress and shocks and maintain or enhance its capabilities and assets both now and in the future, while not undermining the natural resource base.' (Chambers & Conway, 1991). Livelihood is a system that depends on the assets people draw upon, the strategies they develop to make a living, the context within which it is developed and finally all those factors that make a livelihood more or less vulnerable to shocks and stresses.

In recognition that the livelihood assets required include social capital such as informal networks, membership of formalized groups and relationships of trust that facilitate co-operation and economic opportunities. CEDO Uganda undertook the mapping exercise for the institutions which would provide economic empowerment skills delivery aligned to the project interventions such as vocational skill trainings and apprenticeship trainings, in particular play a complementary role.

The access and use of the informal networks, membership of formalized groups and relationships of trust that facilitate co-operation and economic opportunities, form a livelihood strategy. One important characteristic of livelihoods is their interdependence. Very few livelihoods flourish in isolation. A given livelihood may rely on other livelihoods for the membership of other social institutions to access and exchange assets. Thus, positive and negative impacts on any given livelihood will, in turn, impact others.

PART III: PRESENTATION OF THE MAPPING FINDINGS

3.1. Summary of the Findings:

Findings in this report present a summary of the status of vocational institutions and artisans in districts of Jinja, Wakiso, Rukungiri and Sheema. The findings are presented in the form of a profile of each mapped institution or artisan; highlighting the name of the institution or artisan, its location, year of establishment, contact person, the level of intake, the trades offered and, the average cost per trade.

Below is the summary of the profile findings

3.2. Profiles of Mapped Vocational Institutions, Artisans and other Partners in Sheema District

1. Vocation Institution	Ankole West University
Physical Address Location	Kabwohe
Year of Establishment	2005
Contact person	Muhangi Yoas 0782185393 0703918768
Level of Intake	With capacity to organise an agricultural tailored program at their farm field school
Trades Offered	Cost Per Trade
<ul style="list-style-type: none">• Agriculture• Entrepreneurship• It has a good modern farm field school. It is an affiliate of Kyambugo University, UCU and UBTEB	Cost arranged privately

2. Vocation Institution	Taremwa College
Physical Address Location	Kabwohe P.O Box 167, Kabwohe
Year of Establishment	11 years ago

Women's Centre For Job Creation	They into awareness campaigns on livelihoods for women and IGAs such as poultry, Dairy farming, Goat Rearing etc. contact person is Mrs Zeri-delkaali 0782 239880
Phoebe Education Fund for orphans and Vulnerable Children	Located at Victoria Business park Gatsby Building Njerujinja district, they are into Hot culture ,Post-Harvest services, Value addition in agriculture produce, Poultry , Hairdressing, Tailoring, Storage services Contact Richard 0772 834868

3.6. The major sectors for the services provided by the vocational Institutions and artisans with significant and marketable trades

Findings from the interviews with key informants, individual community members who would be served by the mapped institutions and artisans revealed that the most significant service sectors provided in the project sites include:

- Processing of agriculture products (Confectionery, Yoghurt, Ice cream, poultry/animal feeds, chili& tomato sauce, wine & juice extraction)
- Catering Services Skills (Decoration, Tents, Cooking and tent making skills)

- Agriculture (Horticulture, and Mushroom growing)
- Mechanics (motorcycle and Boat engine repairs)
- Tailoring and garment cutting (Re-usable sanitary pads, interior Designs and general wear)
- Crafts (craft shoes, Necklaces, door mats, sitting Mats, leather belts, shoes, Baskets, winnowing baskets, Party baskets, Shopping Bags, Hand Bags)
- Metal works and fabrication

3.7. Level of vocational institution's participation in non-formal skills training

All the key informants from the mapped vocational institutions revealed that the institutions are quite often engaged in non-formal skills training delivery, though a few had formal arrangements with the DIT to do so. Those that offered non-formal skills training do so by:

- Participating in the non-formal skills training with support from the Ministry of Education, Science and Technology
- Having informal arrangements with the trainees to do so
- Initiating and convening meeting with local artisans to offer apprenticeship skills training.
- Institutions flexible and willing to convene tailored training programs suiting the beneficiary population on arrangements agreed to with CEDO Uganda.

3.8. The target groups for which services are offered by the most significant Institutions

- Women
- Men
- Youths
- Female youth
- Persons with Disabilities

Part V: Conclusions and Recommendations

Recommendations:

Considerations should be made to limit conflicts among the beneficiaries and the benefiting partners if there is to be any gain for collective participation in skilling interventions planned. This requires training approaches in group dynamics and collective responsibility

Although findings reveal that the institutions are quite often involved in training people with similar characteristic to that of the intended beneficiaries, the institutions should be trained to incorporate gender needs and other needs of the targeted beneficiaries among other cross-cutting issues.

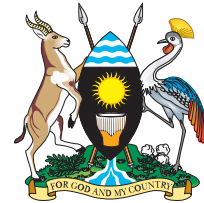

Strategic engagement should be made between CEDO Uganda and the partnering institutions to make the skilling initiatives under the partnerships more tailored to the needs of the beneficiaries.

Conclusions:

This was a very timely and important activity. Findings reveal that all the institutions mapped exhibited the desire and possibility of partnering with the project pursued by CEDO-Uganda in their respective constituencies. However, meaningful placements will require the selected partner institutions or artisans to be facilitated by the project to carry out direct community outreaches as opposed to the participants moving to the distant institutions for placements.

Besides, institutions to be selected for partnership need to meet a criterion that favour: Marketability of trades offered, appropriateness of trades to the target beneficiaries and the proposed mode of delivery that could ensure the institution provides outreach based skills trainings for the distant / remote beneficiaries.
